SUMMARY

Frontend Developer with 4 years of end-to-end experience across enterprise, e-commerce, and CMS-scale projects. I build pixel-perfect, scalable interfaces with React.js/Next.js and Vue.js/Nuxt.js, applying code splitting and Core Web Vitals-focused performance optimization with pre-production Lighthouse validation. I also take on backend responsibilities by developing CMS solutions with Laravel/Filament, reducing cross-team dependencies. I build sustainable design systems through component-driven development, Storybook, and the BEM methodology.

PROFESSIONAL EXPERIENCE

Energetisch.fit

Frontend Developer

Remote, AT

October 2024 – July 2025

- Stabilized critical frontend flows on a Laravel + Livewire therapy booking platform by resolving UI and data integrity issues across cart, PDF generation, email workflow, and progress calculation processes.
- Improved maintainability and user interaction performance by refactoring legacy and hardcoded Laravel views into reusable Livewire/Blade components using component-scoped state, partial updates, and debounce controls.

Technologies: Laravel, Livewire, MySQL, HTML, CSS, Agile, Jira, Scrum, Kanban, Git

Payzec

Frontend Developer

Remote, TR

August 2023 – July 2025

- Contributed to establishing and maintaining a modular monorepo architecture (Git submodules) that unified 4 separate Laravel backend services under a single Vue.js (v3) checkout application for the Payzec startup.
- Developed one-click checkout, cart/order/payment lifecycle management, and asynchronous 3DS payment integration using Vue.js (Composition API), Vue Router, and Pinia.
- Standardized API communication by building an Axios-based useApi composable, implementing centralized auth, CSRF handling, interceptors, and unified error management.

Technologies: Laravel, Vue.js, Pinia, MySQL, MongoDB, Cloud Panel, Tailwind CSS, Firebase, PWA, Mailgun, Git

Alışgidiş

Frontend Developer

Istanbul, TR

March 2024 – July 2024

- Developed product discovery, cart, checkout, and order lifecycle flows for an e-commerce platform using Next.js (App Router, SSR).
- Reduced client-side JavaScript load and improved rendering performance through Server Components, caching and revalidation strategies, and selective code splitting decisions.
- Made asynchronous data flows predictable by architecting server state and optimistic UI management with Zustand and TanStack Query.

Technologies: Next.js, Tailwind CSS, Figma, Zustand, Azure, Jira, Scrum, Git

EDUCATION

Anadolu University — Associate Degree, Computer Programming

2022 – 2024

Eskişehir Osmangazi University — Bachelor's Degree, Civil Engineering

2017 – 2021

FREELANCE / CONTRACT SOFTWARE DEVELOPER

Kontent	<i>İzmit, TR</i>
Full Stack Developer	<i>June 2026 – July 2026</i>
- Converted Figma designs into pixel-perfect HTML/CSS interfaces for corporate client projects, integrating them into a dynamic content infrastructure built on Laravel Blade. - Developed Laravel Filament-based CMS panels enabling content teams to manage media, SEO, navigation, and TR/EN page variations without requiring technical knowledge.	
Machinarium	<i>Remote, TR</i>
Frontend Developer	<i>September 2025 – October 2025</i>
- Built admin panel features and reusable UI components for e-commerce clients using Next.js App Router. - Improved consistency of API integration and error handling by working on the existing Context API global state structure and Axios service layer.	
Patara Soft	<i>Remote, TR</i>
Frontend Developer	<i>November 2023 – February 2024</i>
Built a modular admin panel featuring dynamic tables and AJAX-driven CRUD operations with Blade/jQuery at Patara Soft; implemented i18n support and SEO improvements using semantic HTML.	
Kodlooper Yazılım	<i>Sakarya, TR</i>
Frontend Developer	<i>August 2022 – February 2023</i>
Developed frontend applications using Vue.js, Nuxt.js, and React.js across SSR and SPA architectures at Kodlooper Yazılım; implemented state management with Redux Toolkit and Vuex, and GraphQL integrations with Apollo Client.	

PROJECT

<u>Beta Kimya</u>	<u>İntifa - Curisline Dental</u>
Migrated Beta Kimya’s legacy website into a high-performance, dynamic Filament CMS without losing SEO authority.	Built a modular, multi-language CMS platform for İNTİFA using Laravel & Filament.
- AI-driven extraction & seamless migration of corporate pages, categories, products, news & blog posts. - Complete SEO preservation matching legacy link structures. - Converted static/duplicated hardcoded content into manageable, scalable dynamic content blocks. - Upgraded i18n multi-language engine.	
- Pixel-perfect conversion of Figma designs to responsive SCSS/CSS & Laravel Blade components. - Fully customizable admin panel with section-level role authorization. - No-code page builder allowing admins to construct new pages using existing design tokens & components without writing code. - Multi-language (i18n) localization architecture managed end-to-end via the dashboard.
